

## RxIndex™ R5

**Create your own interface to your databases**

- ActiveX component
- ODBC/OLEDB compatible
- Designed for WEB environments
- Integrate your databases with other applications
- Create your own Data Management System
- Designed for Multi-user environment

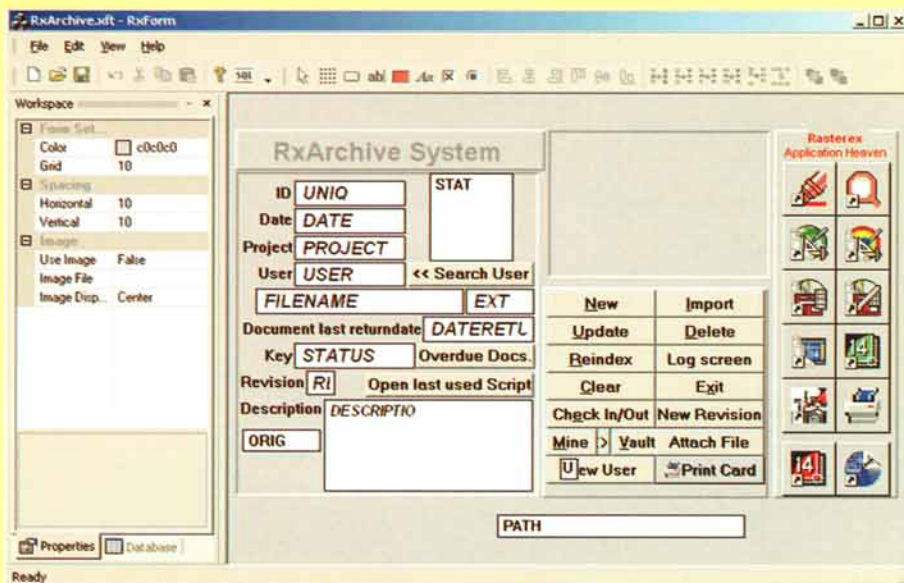

Most of a company's information is stored in different databases, and one of the major challenges is to access and use this information as efficiently as possible. RxIndex presents a user friendly application to design and customize the interface to your databases - an individualized form where multiple users can enter and update information, search for files and records, create reports and launch applications for viewing, editing and printing the selected files.

### Design your own interface

RxIndex hooks up to your existing database, and automatically proposes a presentation form on your desktop. This form can easily be customized by adding, moving, modifying or deleting fields, buttons and objects.

### Scripting – the power behind the buttons

Behind each button or object, the user can use Java-script or VB-script to define operations, and use DDE commands to control other applications for information exchange.

# RxIndex™ R5

Create your own interface to your databases

Rasterex is represented in over 50 countries worldwide. To locate your nearest Rasterex office, distributor or dealer, visit our web site at

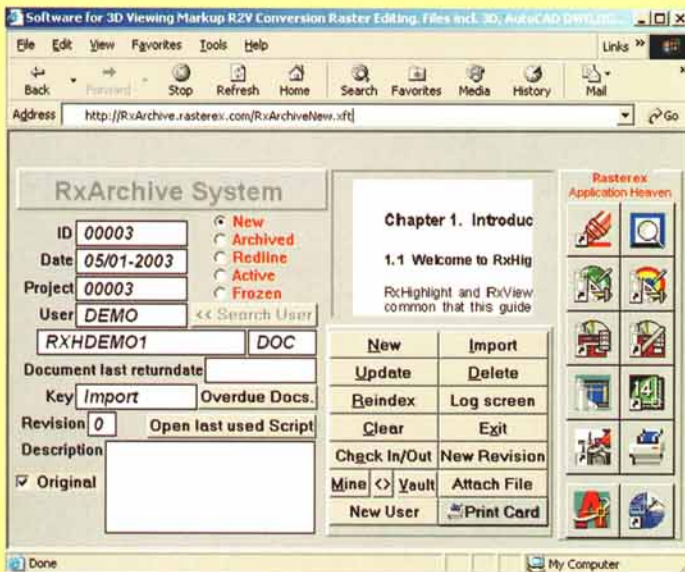

[www.rasterex.com](http://www.rasterex.com)

## Build your own Data Management System

With RxIndex, even non-programmers can create simple or complex Data Management Systems. RxIndex is a multi-user application where the database can be stored on a server and accessed, updated and searched simultaneously by multiple users. With full DDE-interaction with other applications and adapted to the company's work flow, you have the perfect tool to build your own Data Management System.

## Show RxIndex in your WEB browser !

RxIndex is designed for absolute flexibility. As an ActiveX component, it can be accessed anywhere you want – in a standard application window, inside your WEB browser or integrated in your own application.

Your WEB-page (Intranet, Internet or standard HTML) can be a mix of multiple RxIndex forms with reference to multiple databases, and combined with other ActiveX components from Rasterex.

## The Ultimate WEB Solution from Rasterex !

With our ActiveX based technology, Rasterex can present the ultimate solution for Information Management over the WEB. With RxIndex dynamically linked to RxViewX/RxHighX on the same HTML page, all the company's data can be administrated, viewed and collaborated side by side on the same page – inside your standard browser! The expression "information at your fingertips" finally comes true!

## RxIndex key benefits:

- It is easy to use
- It is quick
- It is quick to learn
- It is flexible
- It is compatible with the latest technology
